

BRIGHTTV

VIEWERSHIP ANALYTICS & GROWTH RECOMMENDATIONS

CEO PRESENTATION | CUSTOMER VALUE MANAGEMENT

Turning viewing behaviour into subscription-growth actions

EXECUTIVE SUMMARY

10,000

Viewing events

4,386

Unique subscriber IDs

1,523h

Total viewing hours

9.1 min

Average session

- Viewing is concentrated in a core audience: youth adults (18–35) account for 60% of viewing events.
- Consumption is time-sensitive: evening has the most events, while 17:00 is the busiest hour; weekends have longer average sessions than weekdays.
- Content concentration is high: the top 5 channels generate 61% of events and 79% of viewing hours.
- Monday is the weakest day at 957 events — 43% below Friday — creating a clear activation opportunity.

CEO TAKEAWAY

The growth opportunity is not simply more viewing — it is converting high-performing content moments into acquisition and repeat-use moments.

1 | WHO IS WATCHING?

Audience composition and reach

AUDIENCE SIGNALS

- 18–35 is the dominant segment: 57% of unique IDs.
- 36–50 is the second core segment at 31%.
- Male viewers represent 85% of unique IDs; female viewers represent 11%.
- Gauteng contributes 37% of unique IDs, followed by Western Cape at 18%.

CEO TAKEAWAY Prioritise the 18–35 core, while using content and acquisition propositions to broaden reach beyond the current male/Gauteng concentration.

2 | WHEN DOES CONSUMPTION HAPPEN?

Day-of-week and time-of-day behavior

WEEKDAY VS WEEKEND

Weekends generate fewer events than weekdays, but average session duration is higher (9.7 vs 8.9 minutes).

CEO TAKEAWAY Schedule acquisition and retention moments around the afternoon/evening window, with a specific Monday intervention.

3 | WHAT INFLUENCES CONSUMPTION?

Observed associations in the dataset — not causal proof

THE BIGGEST LEVERS

- Only 3.3% of records are >60 minutes, yet they account for 38.6% of all viewing hours.
- Afternoon sessions are longest on average (10.6 min), while evening produces the largest event volume.
- Weekend sessions average 9.7 min vs 8.9 min on weekdays.
- Channel/content choice is a major lever: the top 5 channels account for the majority of both events and hours.

CEO TAKEAWAY Focus on converting short/low-engagement sessions into longer sessions and use high-performing content as the hook.

4 | WHAT CONTENT DRIVES CONSUMPTION?

Channel performance

CONTENT SIGNALS

- Live Events leads event volume with 1,771 events and 318 viewing hours.
- ICC Cricket World Cup 2011 produces the most viewing hours at 412 hours.
- Channel O and Trace TV are strong entertainment anchors, while SuperSport Blitz adds sports appeal.
- The mix suggests that event-led sports content can create both acquisition spikes and deep engagement.

CEO TAKEAWAY Use proven event and entertainment channels as the backbone of acquisition campaigns, then cross-sell viewers into broader content.

5 | LOW-CONSUMPTION DAY: MONDAY

Turn the weakest day into a weekly growth moment

957

Monday viewing events

43%

below Friday

Monday is the clearest low-day intervention point.

Monday's strongest channel anchors

RECOMMENDED MONDAY PLAY

- Anchor a weekly Monday entertainment block around Channel O / Trace TV.
- Use a live-event or sports tentpole when rights/content allow.
- Promote family/younger-audience programming early evening.
- Package the night as a recurring branded destination.

CEO TAKEAWAY Build a repeatable “Bright Monday” proposition around the strongest Monday channel anchors and an eventides content hook.

6 | HOW SHOULD BRIGHTTV GROW THE USER BASE?

Prioritized CVM initiatives

01 EVENT-LED ACQUISITION

Use major live/sports moments as subscription acquisition windows; pair content access with a clear sign-up proposition.

02 MONDAY REACTIVATION

Create a recurring Monday content proposition to convert a weak day into a weekly habit.

03 LIGHT-VIEWER CONVERSION

Target short/low-engagement viewers with personalized content rails and next-best-content prompts.

04 AUDIENCE EXPANSION

Broaden propositions beyond the current male/18–35/Gauteng concentration with targeted content partnerships and regional campaigns.

CEO TAKEAWAY

CVM should prioritize actions that create acquisition spikes, increase repeat viewing, and deepen engagement — in that order.

7 | 90-DAY ACTION PLAN

From insight to execution

0–30 DAYS

- Define Monday content proposition and audience segments.
- Build event-led acquisition calendar.
- Set baseline KPIs by segment, region and channel.

31–60 DAYS

- Launch Monday pilot with targeted CRM journeys.
- Test content-led acquisition around live/sports events.
- Create lightweight viewer re-engagement journeys.

61–90 DAYS

- Scale the best-performing propositions.
- Compare acquisition and viewing uplift against baseline.
- Lock a repeatable CVM playbook for future content events.

CEO TAKEAWAY

Measure every initiative against incremental subscribers, repeat sessions, viewing hours, and conversion from low- to high-engagement behaviour.

8 | HOW WE WILL MEASURE SUCCESS

CEO scorecard

ACQUISITION

New subscriptions attributable to campaigns

ENGAGEMENT

Viewing hours + average session duration

RETENTION

Repeat viewing / active subscriber rate

CONVERSION

Movement from low/no-usage into longer sessions

CONTENT ROI

Viewing uplift per promoted content/event

REGIONAL GROWTH

Incremental users outside current concentration

CEO TAKEAWAY

The dashboard should become the operating layer for CVM: identify the opportunity, launch the intervention, then measure the incremental outcome.

APPENDIX | DATA & INTERPRETATION

What the analysis can and cannot tell us

DATA BASIS

- BrightTV case-study brief and supplied viewer transaction dataset.
- 10,000 session records and 4,386 unique subscriber IDs.
- One record represents one subscriber viewing session.
- Time analysis uses the SAST-adjusted RecordDate_SAST field.
- Dataset covers Jan–Apr 2016; April contains only 5 records and should be treated as partial.

INTERPRETATION

- The analysis identifies observed patterns and associations; it does not establish causation.
- Channel-level evidence is available, but show-level content performance is not in the dataset.
- Email and social-media flags are constant in the supplied data, so their effectiveness cannot be evaluated.
- Recommendations should be validated with controlled pilots and incremental-lift measurement.

CEO TAKEAWAY

Use the dashboard to prioritize tests; use experiments and subscriber outcomes to prove impact.
